

**Motivation**

In America's \$4.5 trillion healthcare system

- Patients are surprised by bills
- Providers are blamed
- Payers collect premiums only to deny coverage when it's needed most.

The American Healthcare system needs to be

**Architecture**

Our product builds a backend database from healthcare facilities pricing and healthcare data.

Our frontend search uses an AI to convert user input queries into relevant healthcare procedures and insurance information.

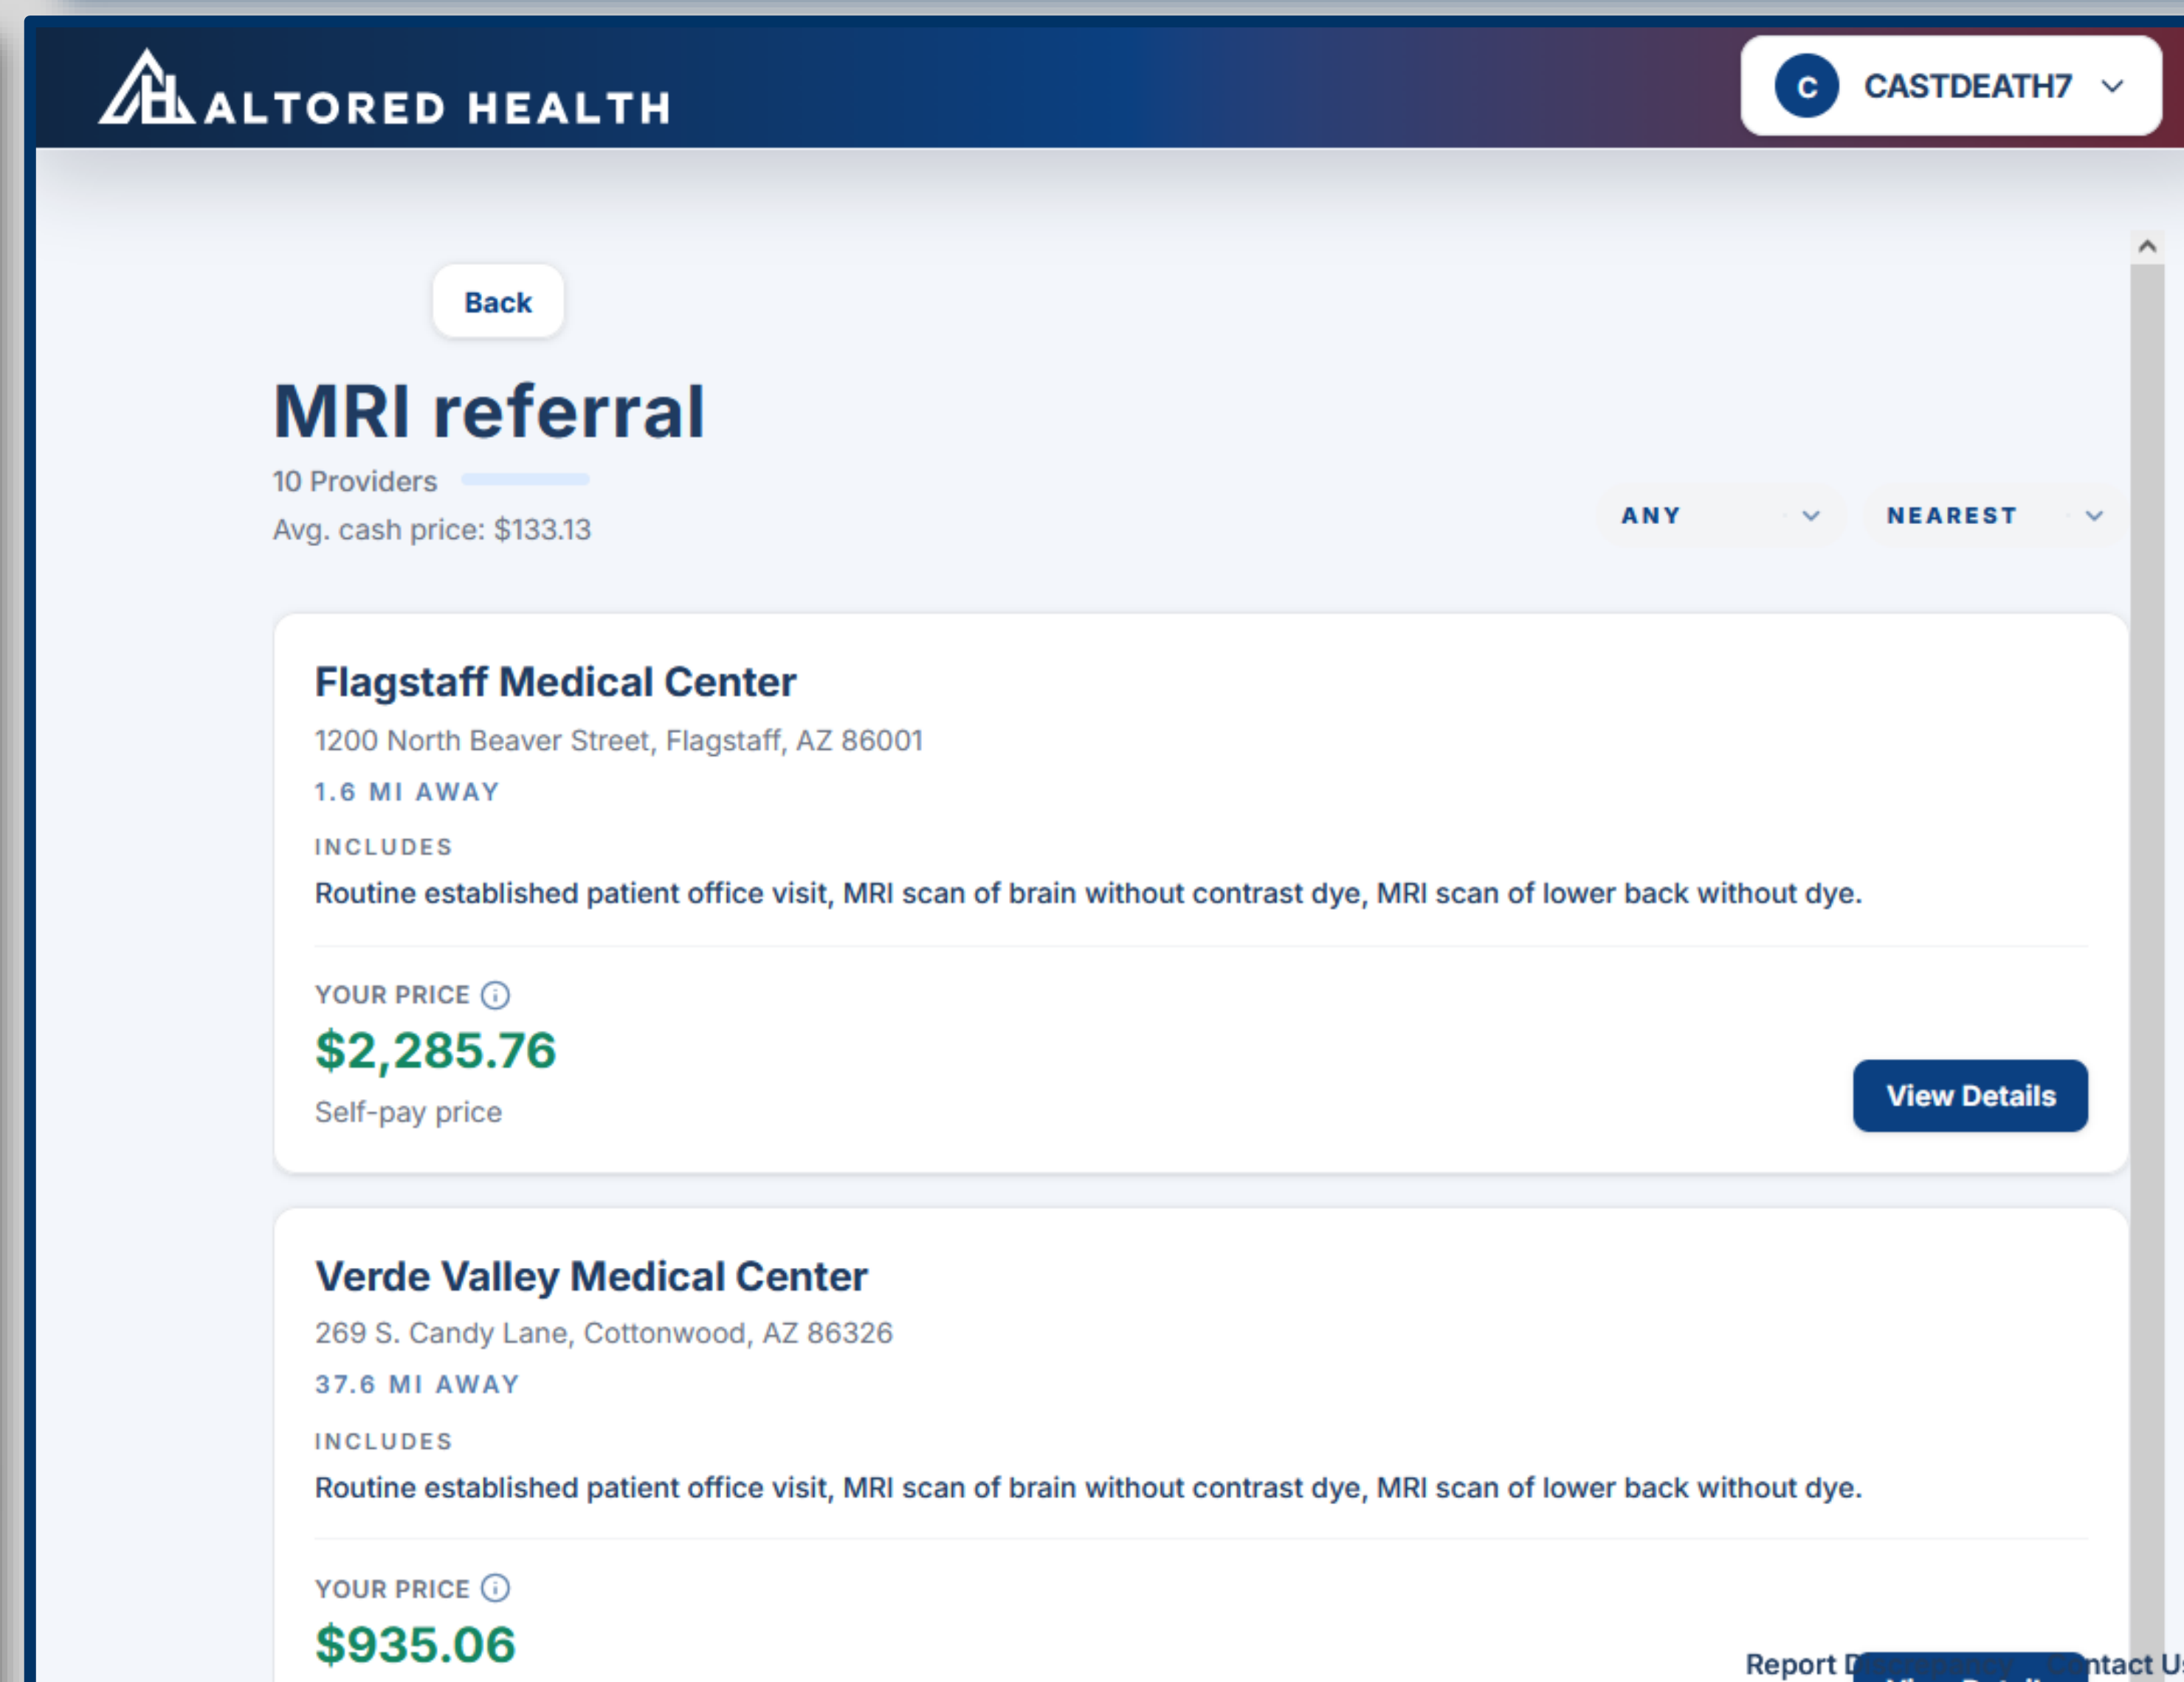

Lastly the relevant healthcare procedures get passed to the backend database to return the user prices and healthcare information.

**Solution Overview**

Our healthcare search fixes many of the issues with the healthcare system.

Currently the system can

- Find procedures
- Show prices for procedures
- Find prices at specific medical centers across Arizona
- Sort care centers by distance and cost.

**Outcomes**

The Altored Health webapp in its current form is capable of better informing healthcare consumers of prices and options.

This application will be the first of its kind and has the potential to transform how information about healthcare is found.

As a result, we hope to increase the average healthcare consumer's knowledge of their care to help them receive better and more affordable care.
